

REMOTE PATIENT DISPENSING (STOCK AND BILL)

Deliver Equipment Without the Delivery Overhead.

Remote Patient Dispensing replaces manual delivery processes with a digital workflow that allows HMEIDME orders to be completed without delivery staff, while keeping inventory, billing, payments, and documentation connected.

Insurance is verified at the time of delivery, co-pays are displayed and collection can be initiated at delivery, sales orders are generated automatically, documentation is sent digitally, and patient data flows directly into your billing system.

WHY IT MATTERS

**Reduce delivery labor and cost**

Complete HME deliveries without delivery staff or in-person visits.

**Get paid faster**

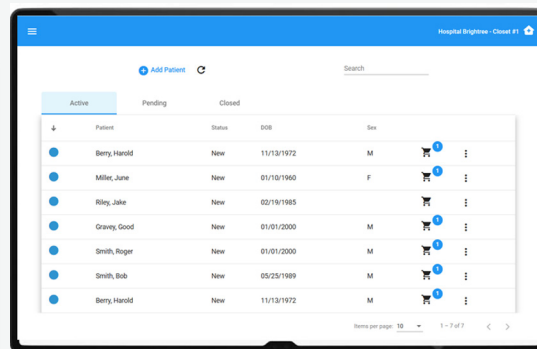

Verify insurance and initiate co-pay collection at delivery.

**Gain more visibility**

Real time inventory status automatically indicates what and when to replenish

**Simplify billing and documentation**

Orders, inventory, and documentation flow directly into your billing system.

Key Capabilities

- Track HME closet inventory in real time to keep stock levels accurate and current.
- Link stocked items and sales orders directly to billing to reduce errors and speed reimbursement.
- Display accurate co-pay amounts and initiate payment collection (optional) at the time of delivery.
- Verify insurance eligibility at delivery to minimize write-offs and improve accuracy.
- Generate SWOs and ABNs with physician e-signatures to streamline delivery workflows.
